

# Colorectal Adenocarcinoma Xenograft Tumor Model

| MODEL              | NOMENCLATURE                         | HAIR | T CELLS       | B CELLS    | NK CELLS   |
|--------------------|--------------------------------------|------|---------------|------------|------------|
| Athymic Nude Mouse | Hsd:Athymic Nude-Foxn1 <sup>nu</sup> | No   | Nonfunctional | Functional | Functional |

## Model

The athymic nude mouse has an autosomal recessive mutation on *nu* locus on chromosome 11. The hairless model is T-cell deficient and accepts xenograft transplantation.

## Cell Line

Human COLO 205 cells sourced from ATCC® (Number: CCL-222™) were implanted into a cohort of athymic nude mice. Female mice at approximately 8 weeks of age were implanted with 5.0e6 cells with GFR Matrigel (1:1 dilution) into the subcutaneous space of the right flank.

## Tumor Growth *in vivo*

The mice were maintained in a barrier under controlled environmental conditions. The mice consumed Teklad Global Rodent Diet 2914 (14% protein). Body weights were taken and tumor measurements were assessed with a caliper twice per week.

Tumor Growth Rate for COLO 205 Cells  
Inoculated into Female Athymic Nude Mice

Data shown as mean values; N=5
